# How to write a problem statement (innovation project)

---

By FTC-34804

- 
- write a problem statement
  - identify a realistic problem area for your team to develop a solution for
  - identify the criteria that your solution should address
-

kickoff

you guys  
are here

competition

# Identify a problem area

First, what are some problems in biodiversity? List them all out.

Then, do some research on these problems. Which one would be most impactful to solve?  
Which ones would be most realistic to solve?

he can't even  
cook rice.

# Select a main focus for your problem

Decide which problem would be solvable and impactful in your time.

What research will you have to do related to the question to gain an understanding of the problem?

Can you do any practical research? If so, how?

Are there any experts you can consult about your problem statement?

# Finally, write ur problem statement

- what's broken or missing, be specific!!
- who does this problem affect?
- why does solving this problem matter? What if we leave it unsolved or do nothing about it?
- success criteria: how will you know that your problem is solved? (or that your solution works?)

# Yeah, that's it, we'll do solution design next week

Also you got like 6-7 weeks left till competition so lock in
